Professional Interests and Experience:

Dr. Dinelli spent most of her research life on high-resolution infrared spectroscopy and on the development and application of algorithms for the analysis of infrared and far-infrared atmospheric spectra measured by limb scanning and nadir looking instruments.

She has been research associate in Prof. T. Oka's group at the University of Chicago, U.S.A. working on infrared spectroscopy of molecular ions and post doctoral research assistant at UCL, London U.K working on the spectroscopic determination of potential energy surfaces of the H_3^+ ion and on the analysis of the infrared spectra of the impact of comet Shoemaker-Levy 9 with Jupiter.

She has spent the early years of her career working on the infrared spectroscopy of molecules in laboratory, spanning different aspects of the research; from building infrared sources (CO_2 lasers) to analyzing the measured spectra. She has worked on the determination of the molecular constants for several molecular ions (i.e. H_2O^+ , N_2O^+ , C_2^-) and on infrared-radiofrequency double resonance spectroscopy.

She has been part of the team of the instrument IBEX (a Far-Infrared Interferometer on board stratospheric balloons) and responsible for the data analysis of the SAFIRE-A instrument (a Far-Infrared Interferometer on board the stratospheric aircraft Geophysica) participating to the APE-GAIA measurement campaign in Ushuaia – Argentina. Since 1995 she has been and is involved in several ESA projects on atmospheric research, such as PIRAMHYD (on the measurement of OH in stratosphere), the development and application of the level 2 processors for MIPAS/ENVISAT, MIPAS special observation modes and MARSCHALS, on the study of the effects of sprites on the NO₂ stratospheric distribution, and on the development of novel techniques for the analysis of the measurements of the (A)ATSR instrument series.

She is involved in the exploitation of CASSINI/VIMS data on Titan's atmosphere, responsible for the Jupiter auroral data for the instrument JIRAM on board the NASA satellite Juno. She has been involved in the studies for the development of the new CTA (Cherenkov Telescopes Array) in La Palma (computation of atmospheric transmission in the visible).

She is head of the Remote Sensing of the Stratosphere group in ISAC, and, since 2018, she is one of the coordinators of the macroarea 'Composizione dell'Atmosfera, Forzanti Climatiche e qualità dell'Aria (CAFCA)' of the ISAC institute

She has been part of the proposing team for the FORUM mission, that was approved for the phase A studies and then has been selected to be the ESA Earth Explorer 9 mission.

She has managed several ESA, ASI and EUMETSAT projects, the last ones being two EUMETSAT projects for the development of the Total Column of Water Vapor product for the Sentinel 3 SLSTR instrument, and she is involved in several studies for the FORUM mission, in particular the ASI funded study SCIEF, FORUM-SCIENZA and the ESA funded study FORUM-Req.

She is part of the current Mission Advisory Group of FORUM and coordinates the project LOLIPOP, part of the ESA Climate Change Initiative.
